Software development for businesses and teams

Full-Stack Developer | .NET Specialist

From an idea to a working product, with .NET at the core.

I'm Amir Mohammad Ebadifar, a software developer focused on web systems and custom solutions. I use .NET and related technologies to turn ideas into practical software products.

✓ Around 5 years of programming experience

ABOUT ME / 01

I build the dependable core of a product.

I have around five years of programming experience, with a primary focus on backend development using C# and ASP.NET Core: API design, databases and web-based systems.

I also work across other parts of a product when needed to deliver a complete, usable solution. I care about software architecture, solving technical problems and teamwork, with hands-on experience in real and independent projects.

SERVICES / 02

What can we build together?

- Custom websites & systems
- Backend & REST APIs
- Admin panels & business systems
- Database design
- External services & integrations
- AI capabilities in software
- Server deployment & setup

TECHNICAL SKILLS / 03

A clear core, with supporting capabilities.

Backend Development

Core specialization

The core of my work

`C#` `ASP.NET Core` `Entity Framework Core` `REST API` `FluentValidation` `Software Architecture`

Database & Storage

Supporting capability

Data, caching and search

`SQL Server` `PostgreSQL` `Redis` `MongoDB` `Meilisearch` `Elasticsearch`

Frontend Development

Supporting capability

The product interface

`Blazor` `HTML` `CSS` `JavaScript`

AI & Integration

Supporting capability

Connecting intelligent capabilities

`ML.NET` `Semantic Kernel`

Infrastructure & Tools

Supporting capability

Runtime and development workflow

`Docker` `Linux` `Git` `GitHub`

Additional Experience

Supporting capability

Complementary experience

`NestJS` `Python` `FastAPI` `Flask`

SELECTED PROJECTS / 04

Real evidence matters more than a list of skills.

Live and available — Production system / Official website

Mehriz Elderly Care Home Website

The official, live website of Mehriz charitable elderly care home, bringing together the centre's story, news, admissions and paths for donors and volunteers.

`Production website` `Content management` `Interactive forms` `Participation workflows`

Currently unavailable

Web application / Team product

Meetyab

A live scheduling platform for finding the best shared meeting time—a hands-on experience of collaborating on a web product.

`Web product` `Team collaboration`

Published as open source

Desktop tool / Open source

PromptBridge

A local desktop tool that packages selected codebase files into a structured prompt for any AI chat assistant, then applies the response to real files with automatic backups.

`Python 3.9+` `Tk` `Local execution` `MIT`

Published as open source

.NET library / NuGet

Ollaya.Client

An idiomatic .NET client for Ollaya, connecting C# applications to a local decision service with structured questions and typed answers.

`C#` `.NET` `NuGet` `Dependency Injection`

PRACTICAL EXPERIENCE / 05

Experience shaped by building products.

01 Production systems

Developing and maintaining the Mehriz care home website

Working on a published website for presenting the centre, sharing news, explaining admissions and supporting participation: turning a real need into a system running on a server.

02 Team collaboration

Co-developer of Meetyab

Collaborating with Alireza Haeri on a platform for finding shared meeting times. The project is currently unavailable, and that status is stated clearly.

03 Independent products

PromptBridge and Ollaya.Client

Building and publishing independent tools, from connecting a codebase to AI chat assistants to a .NET client for a local decision service.
